

Back-N-Forth

SHUTTLE

V4 Sensors

How to operate:

- Attach a magnet to the engine and set sensors on the ends.
- Set the transformer to the running speed of the train.
- If the train does not stop after reaching the sensor, then swap the sensors. The small blue LED will flash when detected.
- If needed, press both buttons to restart the Learn operation.
- Sit back and watch.
- The train will stop short occasionally but will eventually go to the sensor after 30 seconds as it learns.
- Learn remembers on every power up. Each run will get better.

How to Set the Pause Time:

- When the train is paused, turn the dial until the desired color appears:

Pause Time Colors				
				
5 Minutes	1 Minute	20 Seconds	10 seconds	5 Seconds
